# Upgrade to the latest version of Visual Factory Calibre

**Important:** This document is valid for the upgrade of versions 23 or higher to the latest version. If you have version 7.6 or lower, consult with Elecsoft.

Go to the Elecsoft download page ([Elecsoft.com](https://www.elecsoft.com) | [> Downloads](#)) to download the latest version:

## Pre-checks

Before performing the version upgrade, it is advisable to do the following:

- Back up the database.
- Note the current version number that is being used and the path where the program is installed.

## Update procedure

1. Uninstall VFCalibre current on a PC.
2. Install the latest version of VFCalibre with the installation package that has been downloaded from the previous link. Install it in the same folder where it was installed, this way we already have the .config file configured to work with the database.
3. Launch the application from the PC that has been updated.

## Important considerations

Once the program is entered with the new update, the database is updated to the new version. If for some reason you have to revert to the previous version, you must restore the last copy of the existing database and install the previous version of the VFCalibre application again. For this reason, it is advisable to make a backup first of all.

4. Once you have checked that everything is correct, repeat steps 1 and 2 on all PCs where the program is installed.

## Backup Policy

A very important topic in VFCalibre is to manage and maintain a database backup system. From Elecsoft we will offer all our help and support to the IT departments, which will be responsible for establishing their policy and protocol on this issue.

As key points that we advise to take into account:

- Make a periodic plan for database backups.
- Save the copies to a site outside of where the SQL database is installed.
- Check that these copies are being made well and can be restored without problems.

**Note:** *To perform a scheduled task, refer to the Installation Guide that came with the application.*
